

INNOPen™

Thank you for purchasing the INNOPen™.

INNOPen™ microneedling therapy system is an ideal choice for non-surgical and minimally ablative treatment for aesthetic improvement of various skin conditions.

Born of dedication to the advancement of microneedling technology, INNOPen™ displays its superb quality and safety features that surpass the gold standard of its class, delivered to you by the distinguished leader and pioneer of derma needling science, Clinical Resolution Lab, Inc.

INNOPen™ is the world's most advanced and safe microneedling device with a unique, dual spring-loaded disposable needle cartridge (INNOTip™) that uses an automated, vibrating stamp-like motion to cause micro injury to the skin. The gentle stimulation of fibroblast promotes natural induction of collagen and elastin, without the stress of pain and lengthy downtime associated with ablative treatments.

Micro Channels or microconduits resulting from the needles piercing through the skin layers aid in infusing therapeutic serums for greater penetration and enhancement of overall efficacy.

APPLICATION & BENEFITS

- Intensifies trans-dermal delivery for cosmetic, topical, photo-aging and Platelet-Rich Plasma (PRP) treatments
- Diminishes fine lines and wrinkles
- Rejuvenates skin with comprehensive improvement of skin tone and texture
- Minimizes stretch marks
- Restores youth by effectively tightening, lifting and thickening the skin
- Improves the appearance of scars (surgical, burns, acne vulgaris depressions)
- Reduces pore size
- Increases absorption of cosmeceutical solutions
- Delivers visible results painlessly and safely with little to no down time.

INNOPen™ SUPERIORITY

- Made in USA
- High-Speed Quiet Motor
- Fully Adjustable Needle Depth and Speed
- No Overheating
- Ergonomic Design for Effortless Handling
- Yields Consistent Results
- Equipped with Double Protective Tip System, INNOTip™
